DOCUMENTATA ATTIVITÀ IN CAMPO CLINICO*(indicare, data, durata, ruolo, ente presso il quale si è prestata attività assistenziale, ecc.)***REALIZZAZIONE DI ATTIVITÀ PROGETTUALE***(indicare, data, progetto, ecc.)***Research projects:**

- NG-UWB (10/2019- present): Next-generation Ultra-wideband Localization and Communication for the Internet of Things.

Analysis and quantification of the human mobility behavior in indoor environments, based on symbolic representation of the movement. My research activity included the development of an analytical framework for the detection and analysis of stop-move patterns in indoor mobility data in realistic scenarios. The objectives are: first, to examine the performance of the existing stop detection methods in realistic movement scenarios. Second, to define a validation metric to evaluate the quality of patterns based on their spatial and temporal characteristics. And third to investigate analytical methods of interest for a museum application.

The project is a part of the PRIN Program (Research Projects of National Relevance).

Members: University of Trento (coordinator), University of Milan, Politecnico di Torino, University of Brescia.

- Snap4City (04/2018- 09/2019): The project aims to collect and share data from heterogeneous and numerous devices enabled by IOT/IOE technologies and big data analytic, for purposes of management and better interaction in order to cope the city evolution in terms of services and city users’ needs and capabilities. My research activity contributed into the study of the problem of semantic integration of sensor data produced in heterogeneous contexts: Semantic extraction rules have been developed in order to identify relevant information produced by sensors and to which it is possible to associate a semantic label and to transform the data into a common representation. These transformations have a positive impact on the development of IoT applications. In addition, various usability analyzes of the developed system were conducted which allowed to improve the appreciation of the system by possible users.

The project is proposed in response to Select4Cities challenges and is funded by the European Union’s Horizon 2020 research and innovation program.

Members: University of Florence (coordinator), University of Milan.
