Calls for responsibility and social harmony in Italian parliamentary debates", with A. Ceron & A. Scopelliti. Italian Political Science Review, Forthcoming (draft available on request)

Working Papers
Greening the Political Landscape: How Environmental Activism Shapes Electoral Preferences and Media Coverage, with Dafni Kalatzi & A. Ceron. What motivates environmental protests? Does environmental

activism wield substantial influence in shaping media agendas? And how does it impact public perceptions of environmental issues and political preferences? This project sets out to answer these questions by constructing a unique dataset on protests organized by the Fridays For Future and Extinction Rebellion movements across seven EU countries from 2019 to the present

Social media and protest dynamic in autocracy. This study examines the mobilization power of top-down campaigning by opposition leaders versus horizontal peer activism in digitally enabled protests within autocratic regimes, focusing on the 2020 post-electoral protests in Belarus. Using a vector autoregressive model, it finds that top-down campaigning intensifies real-life protests and drives peer activism, with peer activism being linked to more pronounced government repression. The findings emphasize the prevailing mobilization power of formal leadership, revealing that connective action in autocratic settings has limited mobilization potential.

A place to rally around the flag or hub of subversive information? Telegram during Russo - Ukrainian war. This paper investigates whether and to which extent social media might challenge the information hegemony of autocratic regimes in a case study of Telegram during Russo-Ukrainian war. Developing the Interrupted Times Series models, I demonstrate how war influenced production (published content) and consumption (subscribers and views) trends of Russian-speaking Telegram channels. Analysis reveals that pro-regime news coverage dominated the platform and had a significantly greater subscriber base.

Political campaigning under different regime types. This paper compares campaigning strategies across different political regimes—autocracy, democracy, and regimes in transition. It argues that autocratic electoral communication focuses less on mobilizing voters, unlike in democratic and hybrid regimes, and more on advertising incumbent efficiency and regime achievements. Results show that incumbent parties and legal opposition mainly use positive messages and policy-related topics in their campaigns, avoiding negative campaigning. However, audiences are less responsive to autocratic strategies, engaging more with populist and negatively valenced content

Diplomacy in Crisis: Effect of President Zelensky's Diplomatic Endeavors, with A. Ceron. This study investigates how the Ukrainian government's diplomatic actions during the war impacted support both from state institutions and private entities. I collect and merge data on aid to Ukraine with details of President Zelensky's diplomatic activities to explore whether high-level and public diplomacy affect the assistance given during wartime. A quasi-experimental design will be used to address potential endogeneity issues and the non-random timing of diplomatic contacts
