PROFILE

Lecturer in International Health Policy and Systems at Newcastle University, UK.

Main areas of expertise regard: international health systems analysis and comparison, health policy analysis, global health and public policy. These experiences have been acquired both in academic and professional environments.

I am a health policy and systems researcher with a background in political science and social science and PhD in Health Policy and Management with a specific expertise on comparative health systems analysis, health policy analysis, (comparative) public policy.

I have been involved in several research projects in the past years and I worked with different partners, including the Italian and English National Health Service, local governments, international organizations and academic institutions in both developed and developing countries. I'm a member of several international health policy and public policy networks.

I have got experience in developing policy analysis and conducting mixed method research (mostly qualitative) and I'm particularly interested in the intersection between health policy, socio/political determinants of health, health systems and public policies.

My research is aimed at studying and analysing the impact of socio/political and health systems factors on the improvement of the health and wellbeing of the population, the improvement of universal access to health services and the way in which different countries try to face global challenges.

I supervise students in any areas of my research expertise.

In terms of teaching activities, I'm Degree Programme Director for the Public Health and Global Health Postgraduate Programmes at Newcastle University and Module leader of the Health Policy and Systems module within these

programmes.

I have got teaching experience in areas like international health policy and systems, global health, public health, public policy, social policy and comparative politics
