

ALLEGATO B

UNIVERSITÀ DEGLI STUDI DI MILANO

selezione pubblica per n. 1 posto di Ricercatore a tempo determinato ai sensi dell'art.24, comma 3, lettera b) della Legge 240/2010 per il settore concorsuale 01/A4 - Fisica Matematica, settore scientifico-disciplinare MAT/07 - Fisica Matematica presso il Dipartimento di Matematica "Federigo Enriques", (avviso bando pubblicato sulla G.U. n. 91 del 28/11/2017) Codice concorso 3735

Emanuele Haus CURRICULUM VITAE

INFORMAZIONI PERSONALI (NON INSERIRE INDIRIZZO PRIVATO E TELEFONO FISSO O CELLULARE)

COGNOME	HAUS
NOME	EMANUELE
DATA DI NASCITA	31/07/1983

Present occupation

(December 2016 - present): Temporary researcher (RTD-A) at the University of Naples "Federico II".

Post-doc

- **(November 2016 - December 2016):** Research collaborator ("co.co.co.") at the University of Roma Tre.
- **(August 2014 - July 2016):** "assegno di ricerca" (post-doc position) at the University of Naples Federico II.
- **(March 2013 - July 2014):** "assegno di ricerca" (post-doc position) at the University of Rome "La Sapienza".
- **(January 2012 - December 2012):** post-doc position at the Laboratoire de Mathématiques "Jean Leray" (Nantes).

Qualification aux fonctions de Maître de Conférences

- In 2013, I have obtained the French *Qualification aux fonctions de Maître de Conférences* in Mathematics (section 25 of CNRS).

Education

• **(January 2009 - December 2011):** Ph.D. in Mathematics, Università degli Studi di Milano, thesis defended in March 2012.

Title: "Dynamics of an elastic satellite with internal friction. Asymptotic stability vs collision or expulsion".

Advisor: prof. Dario Bambusi.

• **October 2008:** Master's Degree in Mathematics and Applications, Università degli Studi di Milano, 110/110 cum laude.

Title: "Perché la Luna mostra sempre la stessa faccia alla Terra?" ("Why does the Moon always show the same face to the Earth?").

Advisor: prof. Dario Bambusi.

• **December 2004:** Bachelor's Degree in Mathematics and Applications, Università degli Studi di Milano, 110/110 cum laude.

Title: "Magnetoidrodinamica come sistema Hamiltoniano infinito dimensionale" ("Magnetohydrodynamics as an infinite-dimensional Hamiltonian system").

Advisor: prof. Dario Bambusi.

Main research interests

- Dynamics of nonlinear Hamiltonian PDEs: growth of Sobolev norms, beatings and energy cascade; periodic and quasi-periodic solutions, KAM theory, Birkhoff normal form.
- Dynamics of water waves.
- Theory of controllability for PDEs.
- Dynamics of networks moving by curvature.
- Dynamics of a viscoelastic satellite in a gravitational field.

Condensed overview of my scientific production

• Quasiperiodic solutions and growth of Sobolev norms

In [BBHM17a] we prove existence and linear stability of time-quasiperiodic solutions of the pure-gravity water waves equations in finite depth. To obtain such a result, we overcome several technical difficulties, due to the fully-nonlinear nature of the equations and to the fact that the linear frequencies grow sublinearly. The sublinear growth forces us to impose very weak Melnikov conditions, losing space derivatives. We compensate such a loss of regularity by first reducing the linearized operators obtained at each approximate quasi-periodic solution along the Nash-Moser iteration to constant coefficients up to smoothing operators, using pseudo-differential changes of variables that are quasiperiodic in time. This result is also summarized in the note [BBHM17b].

In [CHP14] we give a linear stability result for time-quasiperiodic solutions of the nonlinear Schrödinger equation (NLS) on some compact Lie groups. The existence of such solutions had already been proved by Berti-Corsi-Procesi.

I have also devoted a substantial part of my research activity to the study of questions related to energy transfer in Hamiltonian PDEs. In [HT13] we used Birkhoff normal form in order to prove long-time existence of “close- to-quasiperiodic” solutions of the quintic NLS on the circle, with energy exchange between the Fourier modes belonging to some “clusters” (the result for single-cluster case had already been obtained by Grébert-Thomann). In [HP17], KAM theory is applied to prove infinite-time existence of quasiperiodic solutions with beatings for solutions essentially supported on a single cluster. Concerning the phenomenon of energy cascade, in [HP15] we proved growth of Sobolev norms for the quintic NLS on the two dimensional torus, while in [GHP16] we extended the result to analytic nonlinearities of any degree, also giving time estimates. These two papers generalize the previous work by Colliander-Keel-Staffilani-Takaoka-Tao and by Guardia-Kaloshin on the cubic NLS.

- *Control theory for PDEs*

In [BFH17] we proved local internal controllability for quasi-linear perturbations of the KdV equation on the circle. The proof is based on a Nash-Moser approach and the inversion of the linearized operator is obtained via the techniques developed by Baldi-Berti-Montalto in the setting of KAM theory, combined by classical HUM method and Ingham inequality. This result contained a small loss of regularity, which can be avoided by applying the Nash-Moser theorem that we proved in [BH17]; this result is a slight improvement of a classical theorem by Hörmander. In [BHMo18] we apply this new theorem, together with the reduction techniques developed by Feola-Procesi, and we prove local internal controllability for the quasi-linear Hamiltonian NLS on the circle.

- *Networks evolving by curvature*

In [BHMa17a] we completed the classification of self-shrinking planar networks with two triple junctions (a problem related to blow-up limits of networks moving by curvature), by proving non-existence of theta-shaped self-shrinkers. The result is also summarized in the note [BHMa17b]. In the proceeding [BHMa18] the result is set in a broader context, with more emphasis given to the classification of self-shrinking networks, and with an introduction to the ongoing work on the higher-dimensional case.

- *Dynamics of a deformable satellite*

In my Ph.D. thesis [Hau12], I studied the dynamics of a deformable body with dissipation interacting with a Newtonian field, with particular attention to the question of the stability of the synchronous spin orbit interaction 1:1. In [BH12] we proved local asymptotic stability of the synchronous resonance in the case of a spherical body, while in [HB15] we gave a global result on the asymptotic dynamics, for bodies of any shape, stating that the satellite must collide with the source of the Newtonian field, be expelled to infinity, or be captured in synchronous resonance.

Research grant

Grant winner as Principal Investigator of the research project Stable and unstable dynamics in evolution PDEs at Sapienza Università di Roma, within the program “Progetti di avvio alla ricerca 2014”.

Teaching

Teacher of the class of Analisi Matematica 2 (Calculus II) for students of Automation, Biomedical, Computer, Electronic and Telecommunication Engineering, Università Federico II, Napoli, academic year 2017-2018.

Teacher of the class of Analisi Matematica 2 (Calculus II) for students of Civil, Environmental and Gestional Engineering, Università Federico II, Napoli, academic year 2016-2017.

“Esercitazioni” (practical classes) of Analisi Matematica 1 (Calculus I) for students of Biomedical Engineering, Università Federico II, Napoli, academic year 2015-2016.

“Esercitazioni” (practical classes) of Analisi Matematica 2 (Calculus II) for students of Biomedical Engineering, Università Federico II, Napoli, academic year 2015-2016.

Tutor of Analisi 1 (first year Calculus) for students of Mathematics, Università Federico II, Napoli, academic year 2015-2016.

Mini-course (12 hours): “Growth of Sobolev norms for the nonlinear Schrödinger equation”, Sapienza - Università di Roma, April-May 2013.

Organization of conferences

Member of the scientific and organizing committees of the workshop “A day in nonlinear analysis” (Napoli, 2 March 2017).

Member of the scientific and organizing committees of the school and workshop “Hamiltonian dynamics, PDEs and Waves on the Amalfi coast” (Maiori, 5-10 September 2016).

Member of the organizing committee of the “Roman summer school and workshop: KAM theory and dispersive PDEs” (Rome, 1-11 September 2014).

Talks and seminars

November 2017: “On the classification of networks self-similarly shrinking by curvature”, Graduiertenkolleg Kolloquium, University of Regensburg (Germany).

September 2017: “Growth of Sobolev norms for the nonlinear Schrödinger equation”, seminar of the Math Workgroup, Università Federico II, Naples.

September 2017: “Time quasi-periodic gravity water waves in finite depth”, Conference IperPV2017 “XVII Italian Meeting on Hyperbolic Equations”, Pavia.

June 2017: “Non-existence of Theta-shaped self-similarly shrinking networks moving by curvature”, Workshop “Curves and Networks in Geometric Analysis”, Centro di Ricerca Matematica Ennio De Giorgi, Pisa.

April 2017: “Oscillations and resonance: a universal phenomenon”, Università Federico II, Naples.

February 2017: “A Nash-Moser-Hörmander implicit function theorem with applications to control and Cauchy problems for PDEs”, SISSA, Trieste.

February 2017: “KAM for beating solutions of the quintic NLS”, Séminaire d’Analyse, Laboratoire de Mathématiques Jean Leray, Nantes.

January 2017: “KAM for beating solutions of the quintic NLS”, Winter School “Dynamics and PDEs”, Saint Etienne de Tinée (France).

December 2016: “Dynamics of Hamiltonian PDEs on tori”, Dipartimento di Matematica e Applicazioni, Università Federico II, Naples.

September 2016: “Exact controllability for some quasi-linear PDEs”, Dipartimento di Matematica, Università degli Studi di Milano.

September 2016: “Exact controllability for quasi-linear perturbations of KdV”, SIMAI2016, Milan.

July 2016: “Growth of Sobolev norms for the NLS on T^2 ”, 11th AIMS Conference on Dynamical Systems, Differential Equations and Applications, Orlando, Florida.

May 2016: “Growth of Sobolev norms and beating effects for the NLS on tori”, Università degli Studi Roma Tre.

February 2016: “Growth of Sobolev norms for the NLS on T^2 ”, Analysis Seminar, School of Mathematics, Edinburgh.

October 2015: “Exact controllability for quasi-linear perturbations of KdV”, UPC, Barcelona.

September 2015: “Growth of Sobolev norms for the NLS on T^2 ”, XX Congresso UMI (Italian Mathematical Union), Siena.

July 2015: “Growth of Sobolev norms for the NLS on T^2 ”, Workshop “Trails in Quantum Mechanics and Surroundings”, Como.

March 2015: “Growth of Sobolev norms for the NLS on T^2 ”, Séminaire Analyse non-linéaire et EDP, Institut Henri Poincaré, Paris.

December 2014: “Growth of Sobolev norms for the NLS on T^2 ”, Workshop “KAM and dispersive methods in Hamiltonian PDEs”, Milan.

September 2014: “Growth of Sobolev norms for the quintic NLS on T^2 ”, School “KAM theory and dispersive PDEs”, Rome.

May 2014: “Growth of Sobolev norms for the quintic NLS on T^2 ”, Conference SPT2014 “Symmetry and Perturbation Theory”, Cala Gonone (Sardinia).

November 2013: “Dynamics of the quintic non-linear Schrödinger equation on the n -dimensional torus”, Dipartimento di Matematica, Università degli Studi di Milano.

September 2013: “Growth of Sobolev norms for the quintic nonlinear Schrödinger equation”, workshop “Multiscale methods in small divisor problems”, Maiori (Amalfi coast).

September 2013: “Asymptotic behavior of an elastic satellite with internal friction”, International Meeting on Celestial Mechanics CELMEC VI, San Martino al Cimino - Viterbo.

May 2013: “Dynamics on resonant clusters for the quintic non linear Schrödinger equation”, Dipartimento di Matematica e Applicazioni, Università Federico II, Naples.

January 2013: “Dynamics on resonant clusters for the quintic non linear Schrödinger equation”, Dipartimento di Matematica, Università La Sapienza, Rome.

October 2012: “Dynamics on resonant clusters for the quintic non linear Schrödinger equation”, HANDDY workshop, Station Biologique de Roscoff.

April 2012: “Asymptotic behavior of an elastic satellite with internal friction”, Séminaire d'Analyse, Laboratoire de Mathématiques Jean Leray, Nantes.

February 2012: “Asymptotic dynamics of an elastic satellite with internal friction”, Dipartimento di Fisica, Università La Sapienza, Rome.

September 2011: “Asymptotic stability of the synchronous resonance for an elastic satellite with internal friction”, HANDDY workshop, Île Berder (Bretagne).

September 2011: “Asymptotic stability of the synchronous resonance for an elastic satellite with internal friction”, Laboratoire de Mathématiques Jean Leray, Nantes.

May 2011: “Numbers and notes: from Pythagoras to Debussy”, City hall, Treviglio (BG), Italy.

March 2011: “Asymptotic stability of the synchronous resonance for a viscoelastic satellite”, meeting of the Gruppo Nazionale di Fisica Matematica, Montecatini Terme.

February 2011: “Asymptotic stability of the synchronous resonance for a viscoelastic satellite”, Centro di Ricerca Matematica Ennio De Giorgi, Pisa.

April 2010: “Taming infinity”, School “Anna Frank”, Varese (VA), Italy.

December 2009: “Asymptotic stability of the 1:1 spin-orbit resonance. A dynamical model”, seminar of the research group in Mathematical Physics, Università degli Studi di Milano.

October 2009: “A viscoelastic dynamical model for the study of the asymptotic stability of the 1:1 spin-orbit resonance”, meeting of the Gruppo Nazionale di Fisica Matematica, Montecatini Terme.

Conferences

I took part in the following conferences:

October 2017: “Conference on Hamiltonian Systems (a tribute to the memory of John N. Mather)”, Ascona (Switzerland).

October 2017: “Analysis and Dynamics”, Congress in honour of Luigi Chierchia’s 60th Birthday, Marina di San Gregorio (LE), Italy.

September 2017: Conference IperPV2017 “XVII Italian Meeting on Hyperbolic Equations”, Pavia.

June 2017: Workshop “Curves and Networks in Geometric Analysis”, Centro di Ricerca Matematica Ennio De Giorgi, Pisa, **invited speaker**.

March 2017: Workshop “A day in nonlinear analysis”, **member of the scientific and organizing committee**.

January 2017: Winter School “Dynamics and PDEs”, Saint Etienne de Tinée (France), **invited speaker**.

September 2016: SIMAI2016, congress of the Italian Society of Industrial and Applied Mathematics, Milan, **invited speaker**.

September 2016: “Hamiltonian dynamics, PDEs and Waves on the Amalfi coast” Maiori (SA), Italy, **member of the scientific and organizing committee**.

July 2016: 11th AIMS Conference on Dynamical Systems, Differential Equations and Applications, Orlando (Florida), **invited speaker**.

September 2015: XX Congresso UMI (Italian Mathematical Union), Siena, **invited speaker**.

July 2015: Workshop “Trails in Quantum Mechanics and Surroundings”, Como, **invited speaker**.

June 2015: Summer School “Normal forms and large time behavior for nonlinear PDE”, University of Nantes.

February 2015: Winter School “Dynamics and PDEs”, Saint Etienne de Tinée (France).

December 2014: Workshop “KAM and dispersive methods in Hamiltonian PDEs”, University of Milan, **invited speaker**.

November 2014: Workshop “Dynamics and PDEs”, Cargèse (Corsica).

September 2014: School and Workshop “KAM theory and dispersive PDEs”, University of Rome La Sapienza, **member of the organizing committee**.

June 2014: School JISD2014 “Jornades d’Interacció entre Sistemes Dinàmics i Equacions en Derivades Parcial”, UPC, Barcelona.

May 2014: Conference SPT2014 “Symmetry and Perturbation Theory”, Cala Gonone (Sardinia).

January 2014: “Conference on Hamiltonian PDEs: Analysis, Computations and Applications”, Fields Institute, Toronto.

September 2013: Workshop “Multiscale methods in small divisor problems”, Maiori (Amalfi coast), **invited speaker**.

September 2013: International Meeting on Celestial Mechanics CELMEC VI, San Martino al Cimino - Viterbo.

June 2013: HANDDY conference “Equations Hamiltoniennes et dispersives”, CIRM, Marseille.

October 2012: HANDDY (Hamiltonian and Dispersive equations: Dynamics) workshop, Station Biologique de Roscoff, **invited speaker**.

July 2012: “Nonlinear Hamiltonian PDEs”, Ascona (Switzerland).

September 2011: HANDDY (Hamiltonian and Dispersive equations: Dynamics) workshop, Île Berder (Bretagne), **invited speaker**.

May 2011: School and Workshop “KAM and Cauchy theory for PDEs”, Napoli-Ravello.

February 2011: “Nonlinear dynamical systems and applications”, CRM Ennio De Giorgi, Pisa, **invited speaker**.

September 2010: Riemann International School of Mathematics “Nonlinear Differential Equations”, Verbania (Italy).

January 2010: Winter School “Dynamics and PDEs”, Saint Etienne de Tinée (France).

November 2009: “Three dispersive days”, University of Milan.

October 2009: “Asymptotics in dynamics, geometry and PDEs, generalized Borel summation”, Pisa.

September 2009: International Meeting on Celestial Mechanics CELMEC V, San Martino al Cimino - Viterbo.

May 2009: School and Workshop “New connections between dynamical systems and PDEs”, Napoli-Maiori.

Youth mathematical competitions

Trainer of the local contestants in Naples for the Mathematical Olympiad, since 2016.

Member of the Italian team at the 42nd International Mathematical Olympiad, held in Washington DC, 2001.

Gold medal at the 2001 Italian Mathematical Olympiad.

Winner (1st classified) of the mathematical competition “Kangourou Italia”, category Student, 2001.
